

Create ec2 instance, create some files/dir

Capture snapshot of ebs volume

Create a new ebs vol from that snapshot

Attach it to ec2 instance

See if the files still exist

The screenshot displays the AWS Management Console interface, specifically the EC2 Instances page. The left sidebar shows the navigation menu with categories like EC2, Images, Elastic Block Store, Network & Security, and Load Balancing. The main content area is divided into two sections. The top section, titled 'Instances (1/7)', shows a list of EC2 instances. The instance 'ebs-snapshot' (ID: i-03e305516f39ea17a) is highlighted, showing it is in a 'Running' state. Below this, the 'Storage' tab for the instance is selected, displaying details for the root device and a list of block devices. The block device list shows a volume 'vol-0984ca6e5c06c373a' attached to the instance. The bottom section shows a notification banner indicating a successful snapshot creation from the volume 'vol-0984ca6e5c06c373a'. Below the notification, the 'Volumes (5)' page is visible, showing a list of EBS volumes. The volume 'vol-0984ca6e5c06c373a' is highlighted, showing it is a gp3 type, 8 GiB in size, and in a 'Available' state.
